## Important notice

Dear Customer,
On 7 February 2017 the former NXP Standard Product business became a new company with the tradename Nexperia. Nexperia is an industry leading supplier of Discrete, Logic and PowerMOS semiconductors with its focus on the automotive, industrial, computing, consumer and wearable application markets

In data sheets and application notes which still contain NXP or Philips Semiconductors references, use the references to Nexperia, as shown below.

Instead of http://www.nxp.com, http://www.philips.com/ or http://www.semiconductors.philips.com/, use http://www.nexperia.com

Instead of sales.addresses@www.nxp.com or sales.addresses@www.semiconductors.philips.com, use salesaddresses@nexperia.com (email)

## 74AHC1G66; 74AHCT1G66

Single-pole single-throw analog switch
Rev. 04 - 18 December 2008
Product data sheet

## 1. General description

74AHC1G66 and 74AHCT1G66 are high-speed Si-gate CMOS devices. They are single-pole single-throw analog switches. The switch has two input/output pins (Yand Z) and an active HIGH enable input pin (E). When pin E is LOW, the analog switch is turned off.
2. Features

■ Very low ON resistance:

- $26 \Omega$ (typ.) at $\mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$
- $16 \Omega$ (typ.) at $\mathrm{V}_{\mathrm{CC}}=4.5 \mathrm{~V}$
- $14 \Omega$ (typ.) at $\mathrm{V}_{\mathrm{CC}}=5.5 \mathrm{~V}$
- High noise immunity
- Low power dissipation
- Balanced propagation delays
- Multiple package options
- ESD protection:
- HMB JESD22-A114E exceeds 2000 V
- MM JESD22-A115-A exceeds 200 V
- CDM JESD22-C101C exceeds 1000 V
- Specified from $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ and $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$

[1] The input and output voltage ratings may be exceeded if the input and output voltage ratings are observed.
[2] For TSSOP5 and SC-74A packages: above $87.5^{\circ} \mathrm{C}$ the value of $\mathrm{P}_{\text {tot }}$ derates linearly with $4.0 \mathrm{~mW} / \mathrm{K}$.

|  |  | $\mathrm{V}_{C C}=5.0 \pm 0.5 \mathrm{~V}$ | [2] | - | - | 20 | - | - | 20 | $\mathrm{ns} / \mathrm{V}$ |

[1] To avoid drawing $V_{C C}$ current out of pin $Z$, when switch current flows in pin $Y$, the voltage drop across the bidirectional switch must not exceed 0.4 V . If the switch current flows into pin Z , no $\mathrm{V}_{\mathrm{Cc}}$ current will flow out of terminal Y . In this case there is no limit for the voltage drop across the switch, but the voltage at pins $Y$ and $Z$ may not exceed $V_{C C}$ or GND.
[2] Applies to control signal levels.

[1] At supply voltages approaching 2 V , the analog switch ON resistance becomes extremely non-linear. Therefore it is recommended that these devices be used to transmit digital signals only, when using this supply voltage.

[3] $C_{P D}$ is used to determine the dynamic power dissipation $P_{D}(\mu W)$.
$P_{D}=C_{P D} \times V_{C C}{ }^{2} \times f_{i}+\Sigma\left(\left(C_{L} \times C_{S W}\right) \times V_{C C}{ }^{2} \times f_{0}\right)$ where:
$\mathrm{f}_{\mathrm{i}}=$ input frequency in MHz ;
$\mathrm{f}_{\mathrm{o}}=$ output frequency in MHz ;
$\mathrm{C}_{\mathrm{L}}=$ output load capacitance in pF ;
$\mathrm{C}_{\mathrm{SW}}=$ maximum switch capacitance in pF (see Table 7);
$\mathrm{V}_{\mathrm{CC}}=$ supply voltage in Volt;
$\Sigma\left(\left(C_{L} \times C_{S W}\right) \times V_{C C}{ }^{2} \times f_{0}\right)=$ sum of outputs.

### 11.1 Waveforms and test circuit

Measurement points are given in Table 10.
Logic levels: $\mathrm{V}_{\mathrm{OL}}$ and $\mathrm{V}_{\mathrm{OH}}$ are typical output voltage levels that occur with the output load.

## 15. Legal information

### 15.1 Data sheet status

| Document status ${ }^{[1][2]}$ | Product status $[3]$ | Definition |
| :--- | :--- | :--- |
| Objective [short] data sheet | Development | This document contains data from the objective specification for product development. |
| Preliminary [short] data sheet | Qualification | This document contains data from the preliminary specification. |
| Product [short] data sheet | Production | This document contains the product specification. |

[1] Please consult the most recently issued document before initiating or completing a design.
[2] The term 'short data sheet' is explained in section "Definitions".
[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

### 15.2 Definitions

Draft - The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information

Short data sheet - A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

### 15.3 Disclaimers

General - Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

Right to make changes - NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.
Suitability for use - NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or
malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications - Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.
Limiting values - Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) may cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of this document is not implied. Exposure to limiting values for extended periods may affect device reliability.
Terms and conditions of sale - NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, including those pertaining to warranty, intellectual property rights infringement and limitation of liability, unless explicitly otherwise agreed to in writing by NXP Semiconductors. In case of any inconsistency or conflict between information in this document and such terms and conditions, the latter will prevail.
No offer to sell or license - Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.
