## 3 V to $5.5 \mathrm{~V}, 52 \mathrm{Mbps}$, TSOT23 RS-485/RS-422 Receivers with $\pm 15 \mathrm{kV}$ ESD Protection

## Description

The XR33180, XR33181, XR33183 and XR33184 are high performance RS-485/RS-422 receivers designed to meet the increasing system requirements found in today's high performance serial communication applications.
The receiver includes enhanced failsafe circuitry, guaranteeing a logic-high receiver output when the receiver inputs are open, shorted, or undriven. The XR33180/81/83/84 (XR3318x) receiver input impedance is at least $48 \mathrm{k} \Omega$ ( $1 / 4$ unit load), allowing more than 128 devices on the bus. The bus pins are ESD protected and pass IEC61000 level $4( \pm 15 \mathrm{kV})$.
This is a wide supply ( 3.0 V to 5.5 V ) device that operates at a maximum data rate of 52Mbps and comes in very small 5 -pin and 6 -pin TSOT23 packages, making this standalone receiver ideal for high speed point-to-point RS-485 applications where space is a concern.
The XR3318x offers several pinout options to maximize performance in different applications while maintaining a minimum pin count. The XR33180 is available in a 5 -pin TSOT23 package with the receiver always enabled. The XR33181 is available in a 6 -pin TSOT23 package and offers a active high receiver enable pin while the XR33183 has the same pinout but with active low enable pin. The XR33184 is available in a 6 -pin TSOT23 package with a I/O logic supply pin to ease the interface to MCU's or FPGA's that run off of different supply voltages. The $\mathrm{V}_{\mathrm{L}}$ supply pin allows the XR33184 to interface to other devices running off of supplies from ranging from 1.65 V to $\mathrm{V}_{\mathrm{CC}}$.
All XR3318x options operate up to a max data rate of 52 Mbps , and have excellent propagation delay and skew characteristics making them a good choice for clock fanout or clock distribution systems.

## FEATURES

- Max 52 Mbps data rate
- Wide 3.0 V to 5.5 V supply operation
- Robust Electrostatic Discharge (ESD) protection for RS-485 bus pins
$\square \pm 15 \mathrm{kV}$ human body model
- $\pm 15 \mathrm{kV}$ IEC61000-4-2 air discharge
- $\pm 8 \mathrm{kV}$ IEC61000-4-2 contact discharge
- Enhanced receiver failsafe protection for open, shorted, or terminated but idle data lines
- $-40^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$ ambient operating temperature range
- Lead-free (RoHS 6) TSOT23-5 and TSOT23-6 packaging
- Absolute minimum pin count option, XR33180 (5-pin TSOT23)
- Tri-state RO options, XR33181 and XR33183
- Adjustable I/O supply option to help interfacing to lower voltage logic, XR33184

## APPLICATIONS

- Clock distribution
- Robotic control
- Space constrained systems
- Security camera networks
- Industrial and process control equipment

## Typical Application

Figure 1. Typical Application

Absolute Maximum Ratings
Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Maximum Rating condition for extended periods may affect device reliability and lifetime.

Supply voltage ( $\mathrm{V}_{\mathrm{CC}}$ ) $\qquad$ -0.3V to 7.0 V
Junction temperature $\qquad$ $150^{\circ} \mathrm{C}$

Input Voltages
EN and $\overline{E N}$ -0.3V to 7.0V
Output Voltage
RO (XR33180/81/83) -0.3 V to $\left(\mathrm{V}_{\mathrm{CC}}+0.3 \mathrm{~V}\right)$
RO (XR33184) $\qquad$ -0.3 V to $\left(\mathrm{V}_{\mathrm{L}}+0.3 \mathrm{~V}\right)$
Receiver Input Voltages
A, B $\pm 18 \mathrm{~V}$
Transient voltage pulse, through $100 \Omega{ }^{(1)}$ $\pm 100 \mathrm{~V}$ NOTE:

1. Refer to Figure 3.

## Operating Conditions

Operating temperature range ..................... $-40^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$
$\mathrm{V}_{\mathrm{CC}}$ supply range .3.0V to 5.5 V
Thermal Information
5-pin TSOT23 $\theta_{\text {JA. }}$ $185.5^{\circ} \mathrm{C} / \mathrm{W}$

5-pin TSOT23 $\theta_{\mathrm{Jc}}$................................................61.6 $\mathrm{C} / \mathrm{W}$
6-pin TSOT23 $\theta_{J A}$ $167.3^{\circ} \mathrm{C} / \mathrm{W}$

6-pin TSOT23 $\theta_{\mathrm{Jc}}$ $61.6^{\circ} \mathrm{C} / \mathrm{W}$

## Electrical Characteristics

Specifications are at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$ to 5.5 V unless otherwise noted. Typical values represent the most likely parametric norm at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$, and are provided for reference purposes only.

| Symbol | Parameter | Conditions | Min | Typ | Max | Units |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Logic Inputs/Outputs |  |  |  |  |  |  |
| $\mathrm{V}_{\mathrm{IH}}$ | Logic high input thresholds, EN and EN | XR33181/83 | 2 |  |  | V |

## Applications Information (Continued)

Figure 5. Receiver Enable and Disable Test Circuits and Timing Diagrams

## Applications Information (Continued)

The XR3318x RS-485/RS-422 device is part of Exar's high performance serial interface product line. The analog bus pins can survive direct shorts up to $\pm 18 \mathrm{~V}$ and are protected against ESD events up to $\pm 15 \mathrm{kV}$.

## Enhanced Failsafe

Ordinary RS-485 differential receivers will be in an indeterminate state whenever the data bus is not being actively driven. The enhanced failsafe feature of the XR3318x guarantees a logic-high receiver output when the receiver inputs are open, shorted or when they are connected to a terminated transmission line with all drivers disabled. In a terminated bus with all transmitters disabled, the receivers' differential input voltage is pulled to 0 V by the termination. The XR3318x interprets 0 V differential as a logic high with a minimum 50 mV noise margin while maintaining compliance with the RS-485 standard of $\pm 200 \mathrm{mV}$. Although the XR3318x does not need failsafe biasing resistors, it can operate without issue if biasing is used.

## $\pm 15 \mathrm{kV}$ ESD Protection

ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The receiver inputs of the XR3318x have extra protection against static electricity. Exar uses state-of-the-art structures to protect these pins against ESD of $\pm 15 \mathrm{kV}$ without damage. The ESD structures withstand high ESD in all states: normal operation and powered down. After an ESD event, the XR3318x keeps operating without latch-up or damage.
ESD protection can be tested in various ways. The receiver inputs of the XR3318x are characterized for protection to the following limits:

■ $\pm 15 \mathrm{kV}$ HBM (Human Body Model), bus pins
■ $\pm 15 \mathrm{kV}$ IEC 61000-4-2 air discharge, bus pins

- $\pm 8 \mathrm{kV}$ IEC 61000-4-2 contact discharge, bus pins
- $\pm 4 \mathrm{kV}$ using the Human Body Model, all other pins

## ESD Test Conditions

ESD performance depends on a variety of conditions. Contact Exar for a reliability report that documents test setup, methodology and results.

## Maximum Number of Receivers on the Bus

The standard RS-485 receiver input impedance is $12 \mathrm{k} \Omega$ ( 1 unit load). A standard driver can drive up to 32 unit loads. The XR3318x receiver has a 1/4th unit load receiver input impedance of $48 \mathrm{~K} \Omega$, allowing up to 128 receivers to be connected in parallel on a communication line. Any combination of the XR33180/81/83/84's and other RS-485 receivers up to a total of 32 unit loads may be connected to the line.

## Product Selector Guide

| Part Number | Data Rate | Receiver Enable | Nodes On Bus | V ${ }_{\text {L }}$ Pin | Package |
| :---: | :---: | :---: | :---: | :---: | :---: |
| XR33180 | 52 Mbps | No | 128 | No | 5-pin TSOT23 |
| XR33181 |  | Yes (active high) |  | No | 6-pin TSOT23 |
| XR33183 |  | Yes (active low) |  | No |  |
| XR33184 |  | No |  | Yes |  |
