## 2. EV Board Schematic

PAM
PAM2846 EVB User Guide

## 3. EVB PAM2846 EB7BDA Description

PAM2846 EVB7BDA is an evaluation board for the PAM2846, a six strings LED current sink.
The board is targeted to be used in providing a simple and convenient evaluation environment for the PAM2846. Analog dimming, PWM dimming, single wire dimming, current matching and efficiency etc, on the board make it easy to be evaluated.

Use single power supply ( $8 \mathrm{~V}-24 \mathrm{~V}$ ), LED: $6-12$ serials*6 parallel, the output voltage is auto-adaptive to LED numbers.
PAM2846 EVB7BDA is working in boost and sink mode, so make sure the power supply voltage not exceed the LED voltage too much.

## 4. EV Board View

## EV Board Operational Sequence:

(1) Potentiometer for LED Dimming.
a) Connect ENA to high (Vin, left side).
b) Connect PWMD to high (right side).
c) Setting operating frequency. Connect FSEL to high (left side), $f=1.6 \mathrm{MHz}$; connect FSEL to low (right side), $\mathrm{f}=500 \mathrm{kHz}$; FSEL NC (no connect), $\mathrm{f}=800 \mathrm{kHz}$.
d) Connect Vout to anode of all the six String's LED, their cathode connect to LED1, LED2, LED3, LED4, LED5, LED6 separately.
e) Connect Vin to power supply. Vin=8V-24V.
f) Adjust R11's value to adjust the LED's brightness.

РAM

## (2) PWM Signal Dimming Dunction.

a) Connect ENA to high (Vin, left side).
b) Connect PWMD to an external PWM signal (the center pin).
c) Setting operating frequency. Connect FSEL to high (left side), f=1.6MHz; connect FSEL to low (right side), $f=500 \mathrm{kHz}$; FSEL NC (no connect); $\mathrm{f}=800 \mathrm{kHz}$.
d) Connect Vout to anode of all the six String's LED, their cathode connect to LED1, LED2, LED3, LED4, LED5, LED6 separately.
e) Connect Vin to power supply. Vin=8V-24V.
f) Adjust external PWM signal duty cycle to adjust the LED's brightness.

## (3) Single Wire Dimming Function.

a) Connect ENA to external PWM signal (the center pin).
b) Connect PWMD to high (right side).
c) Setting operating frequency. Connect FSEL to high (left side), $\mathrm{f}=1.6 \mathrm{MHz}$; connect FSEL to low (right side), $\mathrm{f}=500 \mathrm{kHz}$; FSEL NC (no connect); $\mathrm{f}=800 \mathrm{kHz}$.
d) Connect Vout to anode of all the six String's LED, their cathode connect to LED1, LED2, LED3, LED4, LED5, LED6 separately.
e) Connect Vin to power supply. Vin=8V-24V.
f) Adjust external PWM signal to adjust the LED's brightness (see Figure-1).

## PAM2846 EVB User Guide

## 5. EV Board BOM List

| Item | Value | Type | Rating | Description | Vender and Part No. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| C1, <br> C5 | $10 \mu \mathrm{~F}$ | X5R/X7R, Ceramic/1210 | 50 V | Input coupling CAP <br> Output CAP | Torch <br> UDK325BJ106MM-T |
| C6 | $1.0 \mu \mathrm{~F}$ | X5R/X7R, Ceramic/0805 | 25 V | Vin coupling CAP | Murata GRM21BR71E105K |
| C2,C <br> 3 | $1.0 \mu \mathrm{~F}$ | X5R/X7R, Ceramic/0805 | 25 V | VDD_dr and VDD_5V <br> coupling CAP | Murata GRM21BR71E105K |
| C4 | 100 nF | X5R/X7R, Ceramic/0805 | 50 V | comp CAP | Murata GRM219C0G1H104K |
| L1 | $22 \mu \mathrm{H}$ | 1210 | 2 A | Inductor | Sumida CDRH5D16-22R |
| D1 |  | Nihon EC31QS06 | $3 \mathrm{~A} / 60 \mathrm{~V}$ | Schottky Diode | Nihon EC31QS06 |
| R1 | 10 k | 0603 | $1 \%$ | Iset Resistor |  |
| R11 | 200 k | potentiometer |  | Iset Resistor |  |
| R2 | 1 Meg | 0805 | $1 \%$ | Feedback Resistor |  |
| R3 | 30.9 K | 0603 | $1 \%$ | Feedback Resistor |  |
| R10 | $0 \Omega$ | 0603 | $5 \%$ | Comp Resistor |  |
| White <br> LED | 3.2 V (typ) 3.5V(max) at <br> 20 mA |  |  |  |  |

This BOM is for 12 series * 6 parallel LED output. To optimize different numbers LED applications please see Append 1 and 2.

## 6. External Components Selection

## Input Capacitors (C1) and Output Capacitors (C5)

(1) C1 Low ESR needed, 10 F F, X5R/X7R ceramic recommended.
(2) C5 Low ESR needed, 10 1 F, X5R/X7R (rating 50V) ceramic recommended.

## Coupling Capacitors (C2, C3, C6)

(1) $1 \mu \mathrm{~F}, \mathrm{X} 5 \mathrm{R} / \mathrm{X} 7 \mathrm{R}$ ceramic recommended.

## Iset Resistors (R1, R11)

(1) $R$ set all the string's LED current, lled=228*Viset/R, $R=R 1+R 11$.
(2) R1, 10K $\pm 1 \%$ recommend; R11, adjustable, 0-200k.

Feedback Resistors (R2, R3)
(1) Vout $=V_{F B}{ }^{*} R 3 /(R 3+R 2)$.
(2) R2, 1 Meg $\pm 1 \%$ recommend.
(3) Vout_limit is set in 40 V , so R 3 is 30.9 K minimum.

## Comp Resistor (R10) and Comp Capacitor (C4)

(1) R10, shorted.
(2) $\mathrm{C} 4,100 \mathrm{nF}, \mathrm{X} 5 \mathrm{R} / \mathrm{X} 7 \mathrm{R}$ ceramic recommended.

## Inductor (L1)

(1) Low DCR needed, $22 \mu \mathrm{H}$ (rating 2A) recommended

Schottky Diode (D1)
(1) Nihon EC31QS06(3A, 60V) recommended.
(2) B360A $(3 \mathrm{~A}, 60 \mathrm{~V})$ recommended.

PAM

## PAM2846 EVB User Guide

## 7. PCB Layout Guidelines

## Decoupling Capacitors

(1) The capacitors (C6, C2, C3) need to place very close to the PAM2846's pins. The capacitor C1 need place close to the power supply.

## Grounding

(1) The decupling capacitors C2, C3, C4, C6 and R1, R3 should each to be grounded to analog ground (AGND).
(2) The capacitors C1, C5 should each be grounded to power ground (PGND).
(3) Connect the AGND and PGND islands by connecting the GND pins directly to the exposed backside pad. Make no other connections between these separate ground planes.

## Others

(1) Connect L1, SW, D1, C5 with short and wide connections.
(2) Place the Output voltage setting-divider resistors (R2, R3) as close to the OV pin as possible. The divider's center trace should be kept short.
(3) Minimize the size of the SW node while keeping it wide and short. Keep the SW node away from the feedback node and ground.
(4) Place the Iset resistors (R1, R11) as close to the Iset pin as possible.

## 8. PCB Layout Example

PAM

## 9. Append 1, External Component Selection table:
